

GAUZE PACKER AND PACKING OUTFITS.

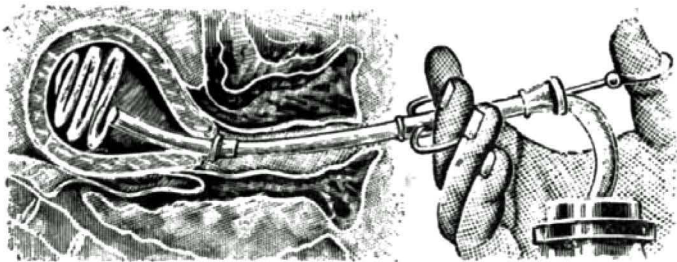

Fig. 6558.

The great utility and practical applicability of this new instrument have brought it quickly into popular favor. Recognizing its great aid to the busy practitioner we have decided to place it within the reach of physicians at a minimum of cost; and to this end offer it either separately or in our specially devised complete outfit at reduced prices.

A fair idea of the construction and method of use may be had from the accompanying cuts. Briefly, this

instrument consists of a body tube, having two ring handles attached to its upper end, for the index and middle fingers; a steel packing rod having a ring handle for the thumb. This rod is so constructed that it carries the gauze down toward the delivery end of the body tube, thus making it possible to transfer the gauze direct from the bottle to the cavity without contact with the hands. This instrument is simple in construction, thoroughly practical in operation and its use is free from septic danger to the patient since it can be properly sterilized.

By its aid gauze may be rapidly and, for the most part, painlessly packed into deep seated abscesses, gun-shot wounds, fistulae and sinuses; and for quickly and aseptically packing uterine cavities it excels any other method in use. The operation is in all cases aseptically performed, since the gauze does not come in contact with the superficial portions or walls of the cavity until it reaches the desired point. Drainage is assured, and since only one strip of gauze need be used for any cavity, removal and re-packing are easy. The many advantages of this instrument to the practitioner and the absence of pain and danger to the patient in its operation alike commend it.

Fig. 6557. B.-M. I. Co.'s Gauze Packing Outfit, containing 1 uterine gauze packer,

1 jar borated gauze strips, 1 jar sublimated gauze strips, 1 jar iodoform gauze strips, 1 bottle antiseptic tablets; in neat box.....
